v.	)	JURY TRIAL DEMANDED
	)	
SPORTS SOUTH LLC, a Louisiana limited liability company,	)	
	)	
Defendant.	)	
	)	
	)	

This is an action for patent infringement in which ABC IP LLC (“ABC”), Rare Breed Triggers, Inc. (“Rare Breed”) (collectively, “Plaintiffs”) accuse Sports South LLC (“Defendant”) of infringing U.S. Patent Nos. 12,038,247, 12,031,784, 12,578,159, and 12,636,403 as follows:

PARTIES

1. ABC is a limited liability company organized under the laws of the State of Delaware with an address at 8 The Green, Suite A, Dover, Delaware 19901.

2. Rare Breed is a Texas corporation having a place of business at 2710 Central Freeway, Suite 150-151, Wichita Falls, TX 76306.

3. Upon information and belief, Sports South LLC is a limited liability company organized under the laws of Louisiana with an address of 101 Robert G. Harris Dr., Shreveport, LA 71115.

JURISDICTION AND VENUE

4. This is an action for patent infringement arising under 35 U.S.C. §§ 271(a)–(c), 281, and 284–85.

5. This Court has subject matter jurisdiction over this action under 28 U.S.C. § 1338, which directs that United States District Courts shall have original jurisdiction of any civil action arising under any Act of Congress relating to patents and pursuant to 28 U.S.C. § 1331, which pertains to civil actions arising under the laws of the United States.

6. Personal jurisdiction over Defendant is proper in this District because the Defendant resides in and has a regular and established place of business in this District.

7. Venue is proper in this District pursuant to 28 U.S.C. § 1400(b). Defendant resides in or has committed acts of infringement and has a regular and established place of business in this District.

BACKGROUND

8. This lawsuit asserts direct, contributory, and induced infringement of U.S. Patent Nos. 12,038,247 (“the ’247 Patent”), 12,031,784 (“the ’784 Patent”), 12,578,159 (“the ’159 Patent”), and 12,636,403 (“the ’403 Patent”) (together, “the Asserted Patents”).

9. The ’247 Patent was lawfully and properly issued by the United States Patent and Trademark Office on July 16, 2024. Each and every claim of the ’247 Patent is valid and enforceable. A true and correct copy of the ’247 Patent is attached as Exhibit A.

10. The ’784 Patent was lawfully and properly issued by the United States Patent and Trademark Office on July 9, 2024. Each and every claim of the ’784 Patent is valid and enforceable. A true and correct copy of the ’784 Patent is attached as Exhibit B.

11. The '159 Patent was lawfully and properly issued by the United States Patent and Trademark Office on March 17, 2026. Each and every claim of the '159 Patent is valid and enforceable. A true and correct copy of the '159 Patent is attached as Exhibit C.

12. The '403 Patent was lawfully and properly issued by the United States Patent and Trademark Office on May 26, 2026. Each and every claim of the '403 Patent is valid and enforceable. A true and correct copy of the '403 Patent is attached as Exhibit D.

13. ABC is the current owner by assignment of all right, title and interest in and to the Asserted Patents. These assignments have been recorded at the United States Patent and Trademark Office ("USPTO").

14. Rare Breed is the exclusive licensee of the Asserted Patents.

15. Plaintiffs have complied with the requirements of 35 U.S.C. § 287 either because the Asserted Patents are not practiced by ABC or any licensee and/or because any licensee has been required to mark its product.

16. Upon information and belief, Defendant has committed acts of direct, contributory, and induced patent infringement, which will be described in more detail below. These acts are in violation of 35 U.S.C. § 271 and should be considered willful.

THE INVENTIONS

17. A typical AR15-pattern firearm, for example, is considered a semiautomatic firearm. The operation of a *standard disconnect* AR-pattern trigger mechanism is commenced by the trigger member being pulled by the user. The trigger member releases the hammer from the trigger sear and allows the hammer to strike the firing pin. A portion of the propellant gas is used to begin the process of sending the bolt carrier to the rear of the firearm. The rearward movement of bolt carrier cocks the hammer on the disconnect and then the bolt is allowed to return forward into battery with a new round inserted into the chamber. While this is happening, in the standard

AR-pattern semiautomatic trigger, the user can either continue to hold the trigger member in a pulled (i.e., fired) state or allow the trigger to return to its reset state, in which the sear, rather than the disconnecter, engages and holds the hammer in a cocked position. When the user reduces pressure on the trigger member to allow the trigger spring to reset the trigger member, the disconnecter releases the hammer to engage the trigger sear.

18. In the standard AR-pattern trigger assembly, the purpose of the disconnecter is to hold the hammer in a cocked position until the trigger member is reset by a trigger spring when the user lets the trigger reset. The disconnecter allows the firearm to be fired only a single time when the trigger is pulled and held, because the user is not typically able to manually reset the trigger rapidly enough so that the sear engages before the bolt carrier or bolt returns to its in-battery position. The disconnecter prevents the firearm from either firing multiple rounds on a single pull of the trigger, or from allowing the hammer to simply “follow” the bolt carrier as it returns to battery without firing a second round, leaving the hammer uncocked.

19. In contrast, in what Plaintiffs have coined a “forced reset” trigger mechanism, cycling of the bolt carrier or bolt causes the trigger member to be mechanically moved to the reset position and hold the trigger member there until the bolt or bolt carrier is back in battery, when it is safe for the user to pull the trigger again, without the need for a disconnecter.

20. The '247 and '159 Patents provide a novel device for accelerating the firing sequence of any semiautomatic firearm, in contrast to a standard semiautomatic trigger or other prior art devices that allow an accelerated rate of semiautomatic firing. The device can be selected to operate in either a standard semiautomatic mode or a “forced reset” semiautomatic mode and uses a cam, rotated by cycling of the action, to cause the trigger member to reset and prevent the trigger member from being pulled again until the action has returned to the in-battery position.

21. The '784 Patent provides a device that works in a trigger system as an extended trigger member locking mechanism for use with a semi-automatic firearm that employs, in some embodiments, a “deflectable extension of the locking member that is actuated by forward movement of the bolt carrier,” among other innovations as explicitly claimed. Certain inventions of the '784 Patent overcome the geometric limitations of prior art designs for use in multiple and varied semi-automatic firearm designs by allowing a locking member to deflect or fold separately from the body portion of the locking member when contacted by the forward portion of the bolt carrier as it cycles to the rear.

22. The '403 Patent describes and claims a similarly operating device with the additional feature that it can be selected to operate in either of two distinct modes: 1) standard disconnecter semiautomatic mode and 2) “forced reset” semiautomatic mode.

23. The claims of the patents define the scope of the patented inventions.

THE INFRINGING DEVICE

24. On information and belief, Defendant previously or is currently making, using, selling, and/or offering for sale products that embody the technology claimed in the Asserted Patents, including a (3-Position) “Atrius Forced Reset Selector” (“the Atrius Selector”), which embodies the technology claimed in at least the '247, '784, '159, and '403 Patents.

25. On information and belief, Defendant previously or is currently making, using, selling, and/or offering for sale the Atrius Selector via the website https://www.theshootingwarehouse.com/?product_department_id=&product_category_group_id=48&product_tag_id=&search_text=&sort_order=relevance&in_stock_only=undefined&product_tag_id=&product_manufacturer_id_1372=true¤t_page_number=1&filter_id_0=true&filter_id_1=true, in multiple variants, including at least:

- a. As a standalone product; and/or

- a. In conjunction with separate trigger mechanism parts; and/or
- b. Pre-installed in a receiver and/or complete firearm.

26. Exemplary photographs are shown below:

	Atrius Development Group ADG-FRS-AMBI Ambidextrous Forced Reset Selector 223/5.56/300 Drop-In Compatible w/ Mil-Spec AR15  Item #198129 UPC #850079014015 MAPP-PRICED
	Atrius Development Group ADG-FRS-AMBI-G G-LEVER Ambidextrous Forced Reset Selector Compatible w/ Geissele SSA, SSA-E, and G2S Triggers Steel  Item #198130 UPC #850079014022 MAPP-PRICED
	Atrius Development Group ADG-FRS-S Forced Reset Selector 223/5.56/300 Drop-In  Item #198128 UPC #850079014008 MAPP-PRICED
	ADG ADG-FRS-S-MS FORCED RESET SELECTOR-MILSPEC  Item #201372 UPC #850079014084 NEW-ITEM MAPP-PRICED

27. The Atrius Selector can operate in a “disconnecter mode,” which is much like that of a standard AR-15 trigger. The user can switch between safe, standard semiautomatic with disconnecter, and “forced reset” semiautomatic with cam modes by rotating the safety selector between positions.

COUNT I – INFRINGEMENT OF THE '247 PATENT

28. Plaintiffs re-allege and incorporate the allegations of the preceding paragraphs as if fully set forth herein.

29. In violation of 35 U.S.C. § 271, Defendant has infringed, induced others to infringe, and/or contributed to the infringement of one or more claims of the '247 Patent, including but not limited to claim 15, literally and/or under the doctrine of equivalents, by among other things,

making, using, offering for sale, selling, and/or importing into the United States unlicensed products in a manner that infringes the '247 Patent. Such unlicensed products include the Atrius Selector.

30. On information and belief, Defendant has and continues to willfully infringe, induce others to infringe, and/or contribute to the infringement of one or more claims of the '247 Patent, including but not limited to claim 15, literally and/or under the doctrine of equivalents.

31. An exemplary comparison of the Atrius Selector, when assembled and used as intended, with claim 15 of the '247 Patent, is illustrated in the chart below:

'247 Patent, Claim 15	The Atrius Selector
15. A firearm trigger mechanism comprising:	When installed and used as directed, the Atrius Selector is part of a trigger mechanism and functions as a cam that in at least one mode, both causes the reset of the trigger and locks the trigger during the cycle of operation.  <u>Sports South, LLC - The Shooting Warehouse</u> Atrius Selector
a hammer having a sear catch and a hook for engaging a disconnector and adapted to be mounted in a fire control mechanism pocket of a receiver	The Atrius Selector (yellow) is installed in a fire control mechanism pocket of a receiver along with a hammer (red) that has a sear catch and a hook for engaging a disconnector (orange).

'247 Patent, Claim 15	The Atrius Selector
	 (Plaintiff-generated renderings of Atrius Selector here and below)
to pivot on a transverse hammer pivot axis between set and released positions, said hammer adapted to be pivoted rearward by rearward movement of a bolt carrier,	The hammer (red) pivots on a transverse hammer pivot axis between set and released positions, depicted below. The hammer is adapted to be pivoted rearward by rearward movement of a bolt carrier.  Hammer Set Position

'247 Patent, Claim 15	The Atrius Selector
	 Hammer Released Position
a trigger member having a sear and adapted to be mounted in the fire control mechanism pocket to pivot on a transverse trigger member pivot axis between set and released positions,	The Atrius Selector (yellow) is installed with a trigger member (brown) in the fire control mechanism pocket that pivots on a transverse trigger member pivot axis between set and released positions and has a sear. The trigger member (brown) has a sear. 

'247 Patent, Claim 15	The Atrius Selector
wherein said sear and sear catch are in engagement in said set positions of said hammer and trigger member	The sear of the trigger member (brown) and sear catch of the hammer (red) are in engagement when the hammer and trigger member are in their set positions.  Trigger Member Set Position
and are out of engagement in said released positions of said hammer and trigger member,	The sear of the trigger member (brown) and sear catch of the hammer (red) are out of engagement in the released position.  Trigger Member Released Position
said disconnecter having a hook for engaging said hammer and adapted to be mounted in the fire control mechanism pocket to pivot	The disconnecter (orange) is adapted to be mounted in the fire control mechanism pocket to pivot on a transverse disconnecter

'247 Patent, Claim 15	The Atrius Selector
on a transverse disconnecter pivot axis,	pivot axis. The disconnecter has a hook for engaging the hammer (red).  Disconnecter Hook Engaged
and a cam having a cam lobe and adapted to be movably mounted in the fire control mechanism pocket,	The Atrius Selector has a cam and lever that is adapted to be movably mounted in the fire control mechanism pocket. (<i>See</i> image above depicting Atrius Selector, shown in yellow, in fire control mechanism pocket)  Atrius Selector Cam with Lobe and Lever

'247 Patent, Claim 15	The Atrius Selector
said cam being movable between a first position and a second position, in said second position said cam lobe forces said trigger member towards said set position,	The cam is movable between a first position and a second position.  Cam and Lobe First Position In the second position, the cam lobe mechanically moves the trigger member (brown) toward the set position when the cam is in the “forced reset” semi-automatic mode.  Cam and Lobe Second Position

'247 Patent, Claim 15	The Atrius Selector
whereupon in a standard semi-automatic mode, said cam is in said first position,	During at least part of the cycle in the standard semi-automatic mode, the cam is in the first position. 
rearward movement of the bolt carrier causes rearward pivoting of said hammer such that said disconnecter hook catches said hammer hook,	Rearward movement of the bolt carrier causes rearward pivoting of the hammer (red) such that the disconnecter (orange) hook catches the hammer hook. 
and thereafter the bolt carrier moves forward into battery,	Thereafter, the bolt carrier moves forward into battery,

'247 Patent, Claim 15	The Atrius Selector
	
at which time a user must manually release said trigger member to free said hammer from said disconnector to permit said hammer and trigger member to pivot to said set positions so that the user can pull said trigger member to fire the firearm, and	. . . at this time a user must manually release the trigger member (brown) to free said hammer (red) from the disconnector (orange) to permit the hammer and trigger member to pivot to the set positions so that the user can pull the trigger member to fire the firearm 

'247 Patent, Claim 15	The Atrius Selector
whereupon in a forced reset semi-automatic mode,	When in the “forced reset” semi-automatic mode, 
said cam is in said second position, rearward movement of the bolt carrier causes rearward pivoting of said hammer such that said disconnecter hook is prevented from catching said hammer hook,	... the cam is in the second position during at least part of the cycle and mechanically moves the trigger member toward the set position. Rearward movement of the bolt carrier causes rearward pivoting of the hammer (red) such that the disconnecter (orange) hook is prevented from catching the hammer hook. 

'247 Patent, Claim 15	The Atrius Selector
and thereafter the bolt carrier moves forward into battery,	Thereafter, the bolt carrier moves forward into battery, 
at which time the user can pull said trigger member to fire the firearm.	. . . at which time the user can pull said trigger member (brown) to fire the firearm. 

32. On information and belief, in addition to direct infringement, Defendant takes active steps to induce others, including its customers, to directly infringe the '247 patent. Defendant takes such active steps knowing that those steps will induce, encourage, and facilitate

direct infringement by others. Such active steps include, but are not limited to, installation of, encouraging, advertising, promoting, and instructing others to use and/or how to use the Atrius Selector.

33. On information and belief, Defendant knows or should know that such activities induce others to directly infringe at least claim 15 of the '247 Patent.

34. On information and belief, Defendant also contributes to the infringement of the '247 Patent by others, including its customers. Acts by Defendant that contribute to the infringement of others include, but are not limited to, the sale, offer for sale, and/or importation by Defendant of the components of the Atrius Selector, such as the cam or cam lever arm. The components are not suitable for substantial noninfringing use as they are specially designed and adapted to be used in a fire control unit to mechanically reset a trigger mechanism and infringe the '247 Patent.

35. Defendant has engaged in egregious infringement behavior with knowledge of the '247 Patent, which has been duly issued by the USPTO, and is presumed valid. On information and belief, Defendant has known or should have known that its actions constituted and continue to constitute infringement of the '247 Patent and that the '247 Patent is valid at least through the service of this complaint. Defendant could not reasonably or subjectively believe that its actions do not constitute infringement of the '247 Patent, nor could it reasonably or subjectively believe that the patent is invalid. Despite that knowledge and subjective belief, and the objectively high likelihood that its actions constitute infringement, Defendant has continued its infringing activities. As such, Defendant willfully infringes the '247 Patent.

36. By its actions, Defendant has injured Plaintiffs and is liable to Plaintiffs for infringement of the '247 Patent pursuant to 35 U.S.C. § 271.

37. By its actions, Defendant's infringement of the '247 Patent has irreparably injured Plaintiffs. Unless such infringing acts are enjoined by this Court, Plaintiffs will continue to suffer additional irreparable injury.

38. By its actions, Defendant's infringement of the '247 Patent has damaged and continues to damage Plaintiffs in an amount yet to be determined.

39. Defendant's infringement of the '247 patent is exceptional and entitles Plaintiffs to attorneys' fees and costs incurred in prosecuting this action under 35 U.S.C. § 285.

40. Defendant's acts of infringement are willful and for no other purpose than to deliberately and irreparably harm Plaintiffs' business, sales, reputation, and good-will.

41. Plaintiffs have been substantially harmed by Defendant's infringing activities and are entitled to relief including but not limited to a preliminary injunction, a permanent injunction, damages adequate to compensate for the infringement, being lost profits or no less than a reasonable royalty, treble damages, and attorneys' fees.

COUNT II – INFRINGEMENT OF THE '784 PATENT

42. Plaintiffs re-allege and incorporate the allegations of the preceding paragraphs as if fully set forth herein.

43. In violation of 35 U.S.C. § 271, Defendant has infringed, induced others to infringe, and/or contributed to the infringement of one or more claims of the '784 patent, including but not limited to claim 1, literally and/or under the doctrine of equivalents, by among other things, making, using, offering for sale, selling, and/or importing into the United States unlicensed products in a manner that infringes the '784 patent. Such unlicensed products include the Atrius Selector.

44. On information and belief, Defendant has and continues to willfully infringe, induce others to infringe, and/or contribute to the infringement of one or more claims of the '784 patent, including but not limited to claim 1, literally and/or under the doctrine of equivalents.

45. An exemplary comparison of the Atrius Selector, when assembled and used as intended, with claim 1 of the '784 Patent is illustrated in the chart below:

'784 Patent, Claim 1	The Atrius Selector
1. In a forced reset trigger mechanism, an extended trigger member locking device, comprising:	When installed and used as directed, the Atrius Selector is part of a “forced reset” trigger mechanism and functions as an extended trigger member locking device. <u>Sports South, LLC - The Shooting Warehouse</u> Atrius Selector Installed (Plaintiff-generated renderings of Atrius Selector here and below; Locking member and bolt carrier shown here and below in section view for clarity)

'784 Patent, Claim 1	The Atrius Selector
a locking member that is movable between a first position in which it locks a trigger against pulling movement	The Atrius Selector operates as a locking member and has a first position in which it locks the trigger member against pulling movement.  Locked First Position
and a second position where it does not restrict movement of the trigger member,	The Atrius Selector is moveable from the first position to a second position where it does not restrict movement of the trigger member.  Unlocked Second Position

'784 Patent, Claim 1	The Atrius Selector
the locking member configured to be movably supported by a frame	The Atrius Selector is movably (pivotally about the axis depicted below) supported by a frame (the lower receiver). 
and including a generally upward extension portion configured to make actuating contact with a surface of the bolt carrier,	The Atrius Selector has an upward extending portion (yellow lever arm) configured to make actuating contact with a surface of the bolt carrier. 

'784 Patent, Claim 1	The Atrius Selector
	 The body portion (purple) has a track with holes that are lined up to correspond to the selectable modes (Fire/ Standard Semi-Automatic, “Forced Reset” Semi-Automatic) which are positively stopped by a detent (blue)  Section View of Body Portion (purple), Lower Receiver (grey), and Detent (blue) Once installed, the body portion (purple) is movably supported by the lower receiver (grey) using the detent (blue).
such actuating contact causing the locking member to move from the first position to the second position,	The actuation causes the locking member to move from the first position to the second position.

'784 Patent, Claim 1	The Atrius Selector
	 Unlocked Second Position
the locking member having a body portion that is movably supported	The Atrius Selector has a body portion (purple) that is movably supported by the lower receiver. 
and an upwardly extending deflectable portion that is separately movable relative to the body portion between an extended position	The Atrius Selector has an upwardly extending deflectable portion (lever arm). The connection is designed to allow separate movement of the lever arm relative to the body portion between one position (depicted in red) where it is extended and another position where it is deflected (depicted in yellow).

'784 Patent, Claim 1	The Atrius Selector
	 Below illustrates the upward extending deflectable portion's (lever arm) total separate travel with an overlay of the lever in both positions without the body portion moving. 

'784 Patent, Claim 1	The Atrius Selector
and a deflected position.	The lever is now shown deflected independent of the body. 

46. On information and belief, in addition to direct infringement, Defendant takes active steps to induce others, including its customers, to directly infringe the '784 patent. Defendant takes such active steps knowing that those steps will induce, encourage, and facilitate direct infringement by others. Such active steps include, but are not limited to, installation of, encouraging, advertising, promoting, and instructing others to use and/or how to use the Atrius Selector while selling products.

47. On information and belief, Defendant knows or should know that such activities induce others to directly infringe at least claim 1 of the '784 Patent.

48. On information and belief, Defendant also contributes to the infringement of the '784 Patent by others, including its customers. Acts by Defendant that contribute to the infringement of others include, but are not limited to, the sale, offer for sale, and/or importation by Defendant of the components of the Atrius Selector, such as the cam or cam lever arm. The components are not suitable for substantial noninfringing use as they are specially designed and adapted to be used in a fire control unit to mechanically reset a trigger mechanism and infringe the '784 Patent.

49. Defendant has engaged in egregious infringement behavior with knowledge of the '784 Patent, which has been duly issued by the USPTO, and is presumed valid. On information and belief, Defendant knows or should have known that its actions constituted and continue to constitute infringement of the '784 Patent and that the '784 Patent is valid at least through the service of this complaint. Defendant could not reasonably or subjectively believe that its actions do not constitute infringement of the '784 Patent, nor could it reasonably or subjectively believe that the patent is invalid. Despite that knowledge and subjective belief, and the objectively high likelihood that its actions constitute infringement, Defendant has continued its infringing activities. As such, Defendant willfully infringes the '784 Patent.

50. By its actions, Defendant has injured Plaintiffs and is liable to Plaintiffs for infringement of the '784 Patent pursuant to 35 U.S.C. § 271.

51. By its actions, Defendant's infringement of the '784 Patent has irreparably injured Plaintiffs. Unless such infringing acts are enjoined by this Court, Plaintiffs will continue to suffer additional irreparable injury.

52. By its actions, Defendant's infringement of the '784 Patent has damaged and continues to damage, Plaintiffs in an amount yet to be determined.

53. Defendant's infringement of the '784 patent is exceptional and entitles Plaintiffs to attorneys' fees and costs incurred in prosecuting this action under 35 U.S.C. § 285.

54. Defendant's acts of infringement are willful and for no other purpose than to deliberately and irreparably harm Plaintiffs' business, sales, reputation, and good-will.

55. Plaintiffs have been substantially harmed by Defendant's infringing activities and are entitled to relief including but not limited to a preliminary injunction, a permanent injunction,

damages adequate to compensate for the infringement, being lost profits or no less than a reasonable royalty, treble damages, and attorneys' fees.

COUNT III — INFRINGEMENT OF THE '159 PATENT

56. Plaintiffs re-allege and incorporate the allegations of the preceding paragraphs as if fully set forth herein.

57. In violation of 35 U.S.C. § 271, Defendant has infringed, induced others to infringe, and/or contributed to the infringement of one or more claims of the '159 patent, including but not limited to claim 1, literally and/or under the doctrine of equivalents, by among other things, making, using, offering for sale, selling, and/or importing into the United States unlicensed products in a manner that infringes the '159 patent. Such unlicensed products include the Atrius Selector.

58. On information and belief, Defendant has and continues to willfully infringe, induce others to infringe, and/or contribute to the infringement of one or more claims of the '159 patent, including but not limited to claim 1, literally and/or under the doctrine of equivalents.

59. An exemplary comparison of the Atrius Selector, when assembled and used as intended, with claim 1 of the '159 Patent is illustrated in the chart below:

'159 Patent, Claim 1	The Atrius Selector
1. A firearm trigger mechanism for a firearm having a fire control mechanism pocket and a reciprocating bolt means, the trigger mechanism operable in a first, standard semi-automatic mode and in a second, forced reset semi-automatic mode, the mechanism comprising:	When installed and used as directed, the Atrius Selector is part of a firearm trigger mechanism that uses a bolt means. With the Atrius Selector installed, the trigger mechanism operates in a standard semi-automatic mode and a "forced reset" semi-automatic mode

'159 Patent, Claim 1	The Atrius Selector
	 <u>Sports South, LLC - The Shooting Warehouse</u> Atrius Selector  Atrius Selector (Installed) (Plaintiff-generated renderings of the Atrius Selector here and below)
a hammer having a sear surface and a hook for engaging a disconnector and adapted to be mounted in a fire control mechanism pocket of a receiver	The Atrius Selector (yellow) is installed in a fire control mechanism pocket of a receiver along with a hammer (red) that has a sear surface and a hook for engaging a disconnector (orange).

'159 Patent, Claim 1	The Atrius Selector
	 Hammer sear surface Trigger member sear surface Atrius Selector (Installed)
to pivot on a transverse hammer pivot axis between set and released positions, the hammer adapted to be pivoted rearward by rearward movement of a bolt means,	The hammer (red) pivots on a transverse hammer pivot axis between set and released positions, depicted below. The hammer is adapted to be pivoted rearward by rearward movement of a bolt means.  Hammer Hammer pivot axis Hammer Set Position

'159 Patent, Claim 1	The Atrius Selector
	 Hammer Released Position
a trigger member having a trigger sear surface and adapted to be mounted in the fire control mechanism pocket to pivot on a transverse trigger member pivot axis	The Atrius Selector (yellow) is installed with a trigger member (brown) in the fire control mechanism pocket and the trigger member pivots on a transverse trigger member pivot axis between set and released positions. The trigger member has a sear surface.
between set and	 Trigger Member Set Position

'159 Patent, Claim 1	The Atrius Selector
released positions,	 The diagram shows a side view of a trigger assembly. A trigger member is in a released position, angled upwards. A hammer member is positioned above it, but its sear surface is not engaged with the trigger member's sear surface. The trigger member has a curved, hook-like shape at its base. Trigger Member Released Position
wherein the trigger member sear surface and hammer sear surface are in engagement in the set positions of the hammer and trigger member	The sear surface of the trigger member (brown) and sear surface of the hammer (red) are in engagement when the hammer and trigger member are in their set positions.  The diagram shows the same trigger assembly in a set position. The trigger member is now angled downwards, and its sear surface (labeled 'Trigger member sear surface') is in contact with the sear surface of the hammer member (labeled 'Hammer sear surface'). Trigger Member and Hammer Member Set Position
and are out of engagement in the released positions of the hammer and trigger member,	The sear surface of the trigger member (brown) and sear catch surface of the hammer (red) are out of engagement in the released position.

'159 Patent, Claim 1	The Atrius Selector
	 Hammer sear surface Trigger member sear surface Trigger Member and Hammer Member Released Positions
the disconnecter having a hook for engaging the hammer and adapted to be mounted in the fire control mechanism pocket to pivot on a transverse disconnecter pivot axis, and	The disconnecter (orange) is adapted to be mounted in the fire control mechanism pocket to pivot on a transverse disconnecter pivot axis. The disconnecter has a hook for engaging the hammer (red).  Disconnecter Hook Engaged

'159 Patent, Claim 1	The Atrius Selector
a cam having a cam lobe and adapted to be movably mounted in the fire control mechanism pocket,	The Atrius Selector has a cam with a cam lobe and lever that is adapted to be movably mounted in the fire control mechanism pocket. (See image above depicting Atrius Selector, shown in yellow, in fire control mechanism pocket)  Atrius Selector Cam with Lobe and Lever
the cam being movable between a first position and a second position, in the second position the cam lobe forces the trigger member toward the set position,	The cam is movable between a first position and a second position.  Cam and Lobe First Position In the second position, the cam lobe mechanically moves the trigger member (brown) toward the set position when the cam is in the “forced reset” semi-automatic mode.

'159 Patent, Claim 1	The Atrius Selector
	 Cam and Lobe Second Position
whereupon in the first mode, rearward movement of the bolt means causes rearward pivoting of the hammer such that the disconnector hook catches the hammer hook,	While in the first (standard semi-automatic) mode,  Cam in the First (Semi-Automatic) Mode ... rearward movement of the bolt means causes rearward pivoting of the hammer (red) such that the disconnector (orange) hook catches the hammer hook.

'159 Patent, Claim 1	The Atrius Selector
	 Disconnecter Hook Catches the Hammer

and thereafter the bolt means moves forward into battery and the hammer moves to its reset position,	Thereafter, the bolt means moves forward into battery and the hammer moves to its reset position, 
at which time the user can pull the trigger member to fire the firearm.	. . . at which time the user can pull the trigger member (brown) to fire the firearm without having to first release pressure on the trigger member. 

60. On information and belief, in addition to direct infringement, Defendant takes active steps to induce others, including its customers, to directly infringe the '159 patent. Defendant takes such active steps knowing that those steps will induce, encourage, and facilitate direct infringement by others. Such active steps include, but are not limited to, installation of, encouraging, advertising, promoting, and instructing others to use and/or how to use the Atrius Selector while selling products.

61. On information and belief, Defendant knows or should know that such activities induce others to directly infringe at least claim 1 of the '159 Patent.

62. On information and belief, Defendant also contributes to the infringement of the '159 Patent by others, including its customers. Acts by Defendant that contribute to the infringement of others include, but are not limited to, the sale, offer for sale, and/or importation by Defendant of the components of the Atrius Selector, such as the cam or cam lever arm. The components are not suitable for substantial noninfringing use as they are specially designed and adapted to be used in a fire control unit to mechanically reset a trigger mechanism and infringe the '159 Patent.

63. Defendant has engaged in egregious infringement behavior with knowledge of the '159 Patent, which has been duly issued by the USPTO, and is presumed valid. On information and belief, Defendant has known or should have known that its actions constituted and continue to constitute infringement of the '159 Patent and that the '159 Patent is valid at least through the service of this complaint. Defendant could not reasonably or subjectively believe that its actions do not constitute infringement of the '159 Patent, nor could it reasonably or subjectively believe that the patent is invalid. Despite that knowledge and subjective belief, and the objectively high

likelihood that its actions constitute infringement, Defendant has continued its infringing activities. As such, Defendant willfully infringes the '159 Patent.

64. By its actions, Defendant has injured Plaintiffs and are liable to Plaintiffs for infringement of the '159 Patent pursuant to 35 U.S.C. § 271.

65. By its actions, Defendant's infringement of the '159 Patent has irreparably injured Plaintiffs. Unless such infringing acts are enjoined by this Court, Plaintiffs will continue to suffer additional irreparable injury.

66. By its actions, Defendant's infringement of the '159 Patent has damaged and continues to damage, Plaintiffs in an amount yet to be determined.

67. Defendant's infringement of the '159 patent is exceptional and entitles Plaintiffs to attorneys' fees and costs incurred in prosecuting this action under 35 U.S.C. § 285.

68. Defendant's acts of infringement are willful and for no other purpose than to deliberately and irreparably harm Plaintiffs' business, sales, reputation, and good-will.

69. Plaintiffs have been substantially harmed by Defendant's infringing activities and are entitled to relief including but not limited to a preliminary injunction, a permanent injunction, damages adequate to compensate for the infringement, being lost profits or no less than a reasonable royalty, treble damages, and attorneys' fees.

COUNT IV — INFRINGEMENT OF THE '403 PATENT

70. Plaintiffs re-allege and incorporate the allegations of the preceding paragraphs as if fully set forth herein.

71. In violation of 35 U.S.C. § 271, Defendant has infringed, induced others to infringe, and/or contributed to the infringement of one or more claims of the '403 patent, including but not limited to claim 38, literally and/or under the doctrine of equivalents, by among other things,

making, using, offering for sale, selling, and/or importing into the United States unlicensed products in a manner that infringes the '403 patent. Such unlicensed products include the Infringing Device.

72. On information and belief, Defendant has and continues to willfully infringe, induce others to infringe, and/or contribute to the infringement of one or more claims of the '403 patent, including but not limited to claim 38, literally and/or under the doctrine of equivalents.

73. An exemplary comparison of the Super Safety, when assembled and used as intended, with claim 38 of the '403 patent is illustrated in the chart below:

74. An exemplary comparison of the Atrius Selector, when assembled and used as intended, with claim 38 of the '403 Patent is illustrated in the chart below:

'403 Patent, Claim 38	The Atrius Selector
38. A forced reset trigger mechanism, comprising:	When installed and used as directed, the Atrius Selector is part of a trigger mechanism.  <u>Sports South, LLC - The Shooting Warehouse</u> Atrius Selector

'403 Patent, Claim 38	The Atrius Selector
a hammer having a hammer hook and adapted to pivot on a transverse hammer pivot axis;	The Atrius Selector (yellow) is installed in a fire control mechanism pocket along with a hammer (red) that has a hammer hook and pivots on a transverse axis.  Atrius Selector (Installed) (Plaintiff-generated renderings of Atrius Selector here and below)
a disconnecter having a disconnecter hook and adapted to pivot on a transverse disconnecter pivot axis; a trigger member; and	The Atrius Selector is installed along with a disconnecter (orange) which has a disconnecter hook and pivots on a transverse disconnecter pivot axis, and a trigger member (brown).  Disconnecter and Trigger Member

'403 Patent, Claim 38 a safety selector adapted to be movable between a standard semi-automatic position	The Atrius Selector The Atrius Selector is a safety selector adapted to be movable between a standard semi-automatic position,  Atrius Selector (installed) in Standard Semi-Automatic Position
and a forced reset semi-automatic position,	. . . and a “forced reset” semi-automatic position.  Atrius Selector (installed) in “Forced Reset” Semi-Automatic Position

'403 Patent, Claim 38	The Atrius Selector
wherein when the safety selector is in the standard semi-automatic position and the trigger member is rearwardly actuated,	When safety selector is in the standard semi-automatic position the trigger member (brown) is rearwardly actuated. 
and after the hammer pivots rearward to a position where the hammer hook is past the disconnecter hook,	The hammer (red) pivots rearward to a position where the hammer hook is past the disconnecter hook (orange), 

'403 Patent, Claim 38	The Atrius Selector
rearward pressure on the trigger member must be reduced to permit the trigger member to then be actuated to fire a firearm.	Rearward pressure on the trigger member (brown) must be reduced to permit the trigger member to then be actuated to fire a firearm. 

75. On information and belief, in addition to direct infringement, Defendant takes active steps to induce others, including its customers, to directly infringe the '403 patent. Defendant takes such active steps knowing that those steps will induce, encourage, and facilitate direct infringement by others. Such active steps include, but are not limited to, encouraging, advertising, promoting, and instructing others to use and/or how to use the Infringing Device while selling products.

76. On information and belief, Defendant knows or should know that such activities induce others to directly infringe at least claim 38 of the '403 Patent.

77. On information and belief, Defendant also contributes to the infringement of the '403 Patent by others, including its customers. Acts by Defendant that contribute to the infringement of others include, but are not limited to, the sale, offer for sale, and/or importation by Defendant of the components of the Infringing Device, such as the cam or cam lever arm or the trigger assembly. The components are not suitable for substantial noninfringing use as they are

specially designed and adapted to be used in a fire control unit to mechanically reset a trigger mechanism and infringe the '403 Patent.

78. Defendant has engaged in egregious infringement behavior with knowledge of the '403 Patent, which has been duly issued by the USPTO, and is presumed valid. On information and belief, Defendant has known or should have known that its actions constituted and continue to constitute infringement of the '403 Patent and that the '403 Patent is valid at least through the service of this complaint. Defendant could not reasonably or subjectively believe that its actions do not constitute infringement of the '403 Patent, nor could it reasonably or subjectively believe that the patent is invalid. Despite that knowledge and subjective belief, and the objectively high likelihood that its actions constitute infringement, Defendant has continued its infringing activities. As such, Defendant willfully infringes the '403 Patent.

79. By its actions, Defendant has injured Plaintiffs and are liable to Plaintiffs for infringement of the '403 Patent pursuant to 35 U.S.C. § 271.

80. By its actions, Defendant's infringement of the '403 Patent has irreparably injured Plaintiffs. Unless such infringing acts are enjoined by this Court, Plaintiffs will continue to suffer additional irreparable injury.

81. By its actions, Defendant's infringement of the '403 Patent has damaged and continues to damage, Plaintiffs in an amount yet to be determined.

82. Defendant's infringement of the '403 patent is exceptional and entitles Plaintiffs to attorneys' fees and costs incurred in prosecuting this action under 35 U.S.C. § 285.

83. Defendant's acts of infringement are willful and for no other purpose than to deliberately and irreparably harm Plaintiffs' business, sales, reputation, and good-will.

84. Plaintiffs have been substantially harmed by Defendant's infringing activities and are entitled to relief including but not limited to a preliminary injunction, a permanent injunction, damages adequate to compensate for the infringement, being lost profits or no less than a reasonable royalty, treble damages, and attorneys' fees.

PRAYER FOR RELIEF

WHEREFORE, Plaintiffs respectfully request that this Court enter judgment against Defendant as follows:

- a. Each of the Asserted Patents has been and continues to be infringed by Defendant;
- b. Defendant's infringement of each of the Asserted Patents has been, and continues to be, willful;
- c. Each of the Asserted Patents is enforceable and not invalid;
- d. A preliminary injunction enjoining Defendant and its principals, agents, successors, assigns, attorneys, servants, affiliates, employees, divisions, branches, subsidiaries, parents, and all others acting in active concert therewith from infringement or contributing to the infringement of each of the Asserted Patents during the pendency of this case or other such equitable relief as the Court determines is warranted;
- e. A permanent injunction enjoining Defendant and its principals, agents, successors, assigns, attorneys, servants, affiliates, employees, divisions, branches, subsidiaries, parents, and all others acting in active concert therewith from infringement or contributing to the infringement of each of the Asserted Patents or other such equitable relief as the Court determines is warranted;
- f. An award of damages adequate to compensate Plaintiffs for the infringement of each of the Asserted Patents that has occurred, together with pre-judgment interests and costs, post-judgment interests and costs, and an accounting;

- g. An award of all other damages permitted by 35 U.S.C. § 284, including increased damages up to three times the amount of compensatory damages found;
- h. An award of all profits received by Defendant from sales and revenues of any kind made as a result of its trademark infringement and unfair competition;
- i. An award of all damages sustained by Plaintiffs as a result of Defendant's infringement, including ascertainable damages, the costs incurred by Plaintiffs for the costs for this action, and Plaintiffs' reasonable attorneys' fees;
- j. A finding that this action is an exceptional case under 35 U.S.C. § 285 and an award to Plaintiffs of their costs and attorneys' fees incurred in this action; and
- k. Any and all other relief, at law or equity, to which Plaintiffs may show themselves to be entitled or which this Court deems just and proper.

DEMAND FOR JURY TRIAL

Plaintiffs, under Rule 38 of the Federal Rules of Civil Procedure, request a trial by jury of any issues so triable by right.

DATED: [August 4, 2026]

Respectfully submitted,

/s/ Matthew T. Habig
